

Pelican's Stealth Controller

Model : PS2

Pelican's Stealth Controller

Pelican's Stealth Controller omitted the gimmicks common to third party controllers opting to focus on quality and design elements that would make the difference in game play. Pelican started by repositioning the R2/ L2 buttons to the bottom of the controller, allowing you to fire them with your middle fingers, resulting in a higher level of comfort, easier access and a quicker firing response. Two other important additions are the 12 foot cord, 25% longer than Sony's Dual Shock TM, and the addition of heavier counter weights on the motors, enhancing dual shock sensation. Last but not least, is Stealth's RUN SILENT feature; High Frequency Response Headphones (Headphones included!!) plug into your Stealth delivering enhanced sound quality while allowing you to tune out the world.

Prijs : €32.95
